## Customized Software Without Custom Programming

### MAS 90® and MAS 200®

Custom Office is one of the most powerful yet least used tools in MAS 90 and MAS 200. Many of you are expert Excel and Word users. Custom Office provides seamless integration between the MS products you know so well and the MAS 90 or MAS 200 software you use every day.

The MS Office Link feature of Custom Office automatically merges accounting information with Microsoft Word, Excel, or Exchange to create custom documents, messages or attachments. For example, with the built-in templates you can automatically create a letter in Word to a customer whose account is past due. In AP, you can scan and attach vendor invoices to the vendor account saving you valuable time when you need to find an invoice copy quickly.

Another component of Custom Office is the Customizer. The Customizer tool allows you to do the following:

#### **Add fields to forms (UDF – User Defined Field)**

- You can add UDFs to almost any entry screen.
- UDFs have import/export capability and are accessible by Crystal Reports
- UDFs can be additional data fields, pictures, sound slips or scanned documents.

#### **Field Level Security**

- Data validation
- “view” only fields

#### **Rearrange fields on data entry screens**

- Delete unneeded fields
- Change the order of fields on the screen

#### **Relabel field descriptions**

#### **Add text box or reminders**

#### **Add buttons to launch another application**

In summary, Custom Office helps you to make your business work the way you want by giving you more control, greater efficiency and added productivity from your MAS 90 or MAS 200 software.

### MobileFrame® Custom Mobile Applications

Would you like to eliminate the manual data entry required for the mounds of information your team collects in the field? Friendly Systems is proud to announce we now can offer a solution that lets you create custom mobile apps for PDAs, Tablets or Notebooks with **no custom programming required**. To summarize....

MobileFrame provides Configurable Mobile Applications™ to help organizations better manage their mobile workers. MobileFrame is unique because it allows customers to deploy custom mobile applications with no custom programming required. It can be configured by end users without involving IT staff, which enables companies to easily create a wide range of mobile applications for **building inspections, inventory tracking, citations, work orders, time tracking, asset management...**any mobile application required in the field.

- With MobileFrame, users can capture rich data types such as photos, sketches, barcode scans, digital signatures, voice notes, RFID and GPS data – all embedded in the workflow.
- With one platform you can deploy mobile applications across all departments, on any Microsoft compatible device (laptops, tablets, PDAs) without the need for expensive 3<sup>rd</sup> party mobile gateways or synchronization engines.
- At the City of San Jose, MobileFrame automated 8 different mobile applications in less than 4 hours! These were applications that the City's IT department had envisioned taking up to 6 months to custom program.

To show you MobileFrame in action we'd like to invite you to view our online demo at [www.mobileframe.com](http://www.mobileframe.com) and click on “View Online Demo”. Username and password are both “fs”.

After viewing the demo, please contact us to discuss how MobileFrame can help your employees be more accurate, more efficient and better informed to serve your customers better than the competition.
